

Anti-AI Writing: Example Review

Anti-AI Writing: Example Review

This is a worked example of the skill's active review mode, run on a short AI-sounding paragraph. The four sections below are exactly what the skill returns.

The draft under review:

In today's rapidly evolving landscape, leveraging cutting-edge AI solutions can be a game-changer for organizations. It's not just about technology, it's about transformation. Honestly, the possibilities are endless, and the future looks bright.

1. Violations found

Quoted text	Rule	Why it fails
"In today's rapidly evolving landscape"	Rule 8, Rule 2	Formulaic opener that delays the point
"leveraging cutting-edge AI solutions"	Rule 6	Tier 1 vocabulary, "leverage" and "cutting-edge"
"a game-changer"	Rule 9	Significance inflation with no measure
"It's not just about technology, it's about transformation"	Rule 20	Parallel negative construction used for effect
"Honestly"	Rule 23	Banned word, every instance is a defect
"the possibilities are endless, and"	Rule 30	Comma placed directly before "and"
"the future looks bright"	Rule 15	Generic, empty conclusion

2. Rewritten version

On-site inspection of bridge welds with a vision model cut the review time from four hours to twenty minutes in our pilot, because the model flags the joints a human should look at rather than every joint. The remaining work is the false-positive rate, which sits at eight percent and needs a second pass before the method replaces the manual review.

3. Change summary

The opener and the conclusion were deleted, since both delayed or padded the point rather than carrying information, which addresses Rule 2 and Rule 15. The inflated vocabulary was replaced with a measured claim, a cut from four hours to twenty minutes, which addresses Rule 6 and Rule 9. The parallel negative construction was dropped in favour of a direct statement, which addresses Rule 20. The banned word and the comma before "and" were removed, which addresses Rule 23 and Rule 30.

4. Second-pass audit

The rewrite was re-read for surviving patterns. It carries no Tier 1 vocabulary, no em-dash, no semicolon, no comma before “and” and no banned word. The two numbers each carry a unit and a context, so they pass Rule 13. The result reads as a specific claim a person would make, so the audit is clean.
